

1 Hello World

I'm Sam.

This is an example of a .tex file that will be placed in the OPC500 github repository along with it's .png/.pdf output. Github does not have a way to compile .tex on platform so I believe the pipeline is to pull .tex file from Github when editing, edit locally, use a TeX compiler locally to render the new .pdf, then push changes to .tex and upload new .pdf rendering to the repo.
